

ERP Logic Solution Brief

SAP for Apparel & Footwear Solution (AFS)

This document provides an overview of ERP Logic's functional expertise and solution offerings on SAP-AFS and Retail solutions.

Companies involved in the production, marketing, and sale of apparel and footwear must increase efficiencies, reduce costs, and ensure compliance with legal requirements and ethical guidelines across their entire supply chain. This is easier said than done. Most companies are hampered by a legacy of nonintegrated systems that limit visibility and perpetuate inefficiencies. And although many of them recognize the need to standardize on a single platform, none of them have the resources to engage in a long-term system implementation project with ill-defined business benefits.

A Solution Built for You

The SAP® Apparel and Footwear (SAP AFS) application implemented by ERP Logic lets our customers make the changes they need with minimal disruption to their operations. This application combines the mySAP™ ERP solution with the SAP Best Practices for Apparel and Footwear offering to enable rapid implementation of the technology our customers need at a defined price. It increases our customer's ability to meet market demands and compete effectively without straining their budget or risking their business.

By pairing SAP AFS with the services of a recommended implementer such as ERP Logic who is a premium SAP partner our customers can be enjoying the benefits of a fully configured enterprise-class solution in as little as 20 weeks, depending on our customer's circumstances. This section outlines some of the functional advantages of the offering.

1. Single Platform for greater effectiveness
2. Extended Sales order processing
3. Optimized Sourcing and Sub-contracting
4. Integrated Stock Management
5. Collaborative In-house and external manufacturing
6. Rapid Implementation at a defined price

Today's successful organizations are information-driven, utilizing enterprise applications to automate, manage, analyze and share information across the enterprise-and across the supply chain. SAP business applications deliver the foundation and functionality to optimize and connect key business processes from procurement and sales through manufacturing and delivery with complete integration to accounting.

Designed to maximize the rich functionality and exceptional scalability of the SAP® Apparel and Footwear (SAP AFS)™ application, the ERP Logic portfolio of full lifecycle services is an invaluable advantage for enterprises at all stages of the fashion value chain. These services enable large and midsize companies to make more informed decisions. To operate more efficiently at all levels and to develop sustainable business benefits and competitive advantages.

ERP Logic brings together key collaborators who have been working with SAP from the inception of its early stage of Apparel and Footwear Solution (AFS) Release.

We Thrive with Our Customers

ERP Logic Functional Expertise

SAP IS –AFS and Retail	SAP IS-AFS is an integrated and comprehensive solution that puts apparel and footwear companies in complete control of their supply chain, ERP Logic will allow our customers to improve manufacturing lead times, increase the performance of our supply chain, and present a more consistent face to our retail customers

SAP IS-AFS Allocation	ERP Logic has demonstrated knowledge in allocation process in SAP-AFS and have worked and created some best practices around an important constituent of source allocation process i.e. quota, spread rule, release rule and custom reporting and stock categories in SAP-AFS.
SAP IS-AFS Sales and Operation Planning (SOP)	SOP helps organizations build upon their tactical plan after strategic planning has been done. A broad SOP system can streamline the planning cycle and the flow of information between different entities within the organization. Analysis of historic sales data is the basis for creation of statistical forecasts. Adjustments to this forecast by different teams, such as Product Managers, Account Managers, Key Accounts themselves, Sales Managers and Sales Representatives lead to a resulting collaborative sales forecast. ERP Logic provides industry best practices for implementing an effective SOP that are integral part of any organization.
SAP IS-AFS Stock overview Demand and Supply Overview	Custom enhancement for Stock requirement list which will enable less complexity to read Demand and Supply overview at size level pegging against Forecast, Sales Order, Consignment, Incoming stock, existing stock and released PO. Demand Planning and Forecasting is a key requirement in fast moving Apparel and Footwear industry. ERP Logic has proven best practice setups and configurations that will assist in total visibility
SAP IS-AFS – SAP Portal SFA Automation	ERP Logic's extensive experience in SAP NetWeaver and the SAP Enterprise Portal promise to provide new distribution and management tools for Sales related documents. Included will be the capability of extracting information from completed documents and subsequently update backend databases. The use the SAP Guided Procedures and composite application framework will be utilized to better manage the distribution and approvals of electronic documents. The vision is that this use of documents will enable customer sales force to streamline Field Sales processes in future systems.
SAP IS-AFS With SAP BI Integration	Business Intelligence provides the organization with the expertise to create a powerful information hub that supports informed decisions at all levels. ERP Logic BI Solution offers various tools and accelerators to achieve fast and cost effective implementation.
SAP IS-AFS With SCM APO –Inventory Collaboration Event Management	Achieving Collaboration, Planning, Execution and Coordination across the supply chain network is critical for business efficiency. ERP Logic Solution adopts an iterative prototyping solution approach to enable the AFS customer to achieve its supply chain goals.
SAP IS-AFS With CRM	Supporting the customer facing business processes across various channels is a challenge for today's organizations. ERP Logic's CRM Solution enables the organizations to capitalize on customer insight and streamline critical processes across customer touch points
SAP IS-AFS and Retail Master Data Integration	SAP Master Data Management (SAP MDM) is a component of SAP's NetWeaver product group and is used as a platform to consolidate, cleanse and synchronize a single version of the truth for master data within a heterogeneous application landscape. It has the ability to distribute internally and externally to SAP and non-SAP applications.
